

TEJAS TARLE

Backend Engineer | Node.js, Express, MongoDB | Payment Gateway Integrations
Nashik, Maharashtra, India (open to relocation) | +91 93564 89327 | tejastarle2441@gmail.com
linkedin.com/in/tejastarle | github.com/tejastarle

SUMMARY

Backend engineer who has shipped five production systems across web and Android. Core strength is payment gateway integration built by hand against REST APIs: Razorpay, Stripe and PayPal, covering order creation, checkout handoff, webhook and signature verification, idempotent retries, refunds and reconciliation of pending and failed transaction states. Owns services end to end, from schema design and API contracts through deployment and production debugging on Linux. Seeking a backend or full-stack engineering role in payments.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Java, SQL, C, C++, HTML5, CSS3, XML

Backend: Node.js, Express.js, REST API design, microservices, OAuth 2.0, JWT, OTP authentication, rate limiting, session and token management, server-side business logic

Payments: Razorpay, Stripe, PayPal, UPI flows, webhooks and callbacks, order-capture-refund lifecycle, HMAC signature verification, idempotency keys, transaction reconciliation, payment state machines

Databases: MongoDB, MySQL, Oracle, Firebase Realtime Database; schema design, indexing, query optimisation

Frontend: ReactJS, responsive UI, component architecture, state management

Mobile: Android (Java/XML), Flutter, MVVM, Material Design, Firebase Auth and Cloud Messaging, Google Play release

DevOps and Tools: Git, GitHub, CI/CD pipelines, Linux, Nginx, DNS and domain configuration, SSL/TLS, Postman, production debugging

Concepts: Data structures and algorithms, OOP, DBMS, system design, RESTful architecture, secure coding, OWASP Top 10

AI Integration: LLM API integration (Anthropic, OpenAI), tool and function calling, prompt engineering, automated reporting agents

Delivery: Agile, Scrum, Kanban, Jira, Asana, sprint planning, code review, stakeholder communication

PROFESSIONAL EXPERIENCE

Vice President and Program Manager, Agix International Pvt. Ltd.

Dec 2025 - Present

Remote, India | Individual contributor on backend engineering plus delivery ownership

- Build and ship backend services for the Agix corporate platform and internal tooling in Node.js, Express and MongoDB, covering REST API design, authentication, role-based access control and deployment pipelines.
- Translate ambiguous business requirements into concrete API contracts and technical specifications across ReactJS, Node.js, Firebase, Flutter and LLM tooling.
- Build market-research dashboards, analytics platforms and automated reporting services used for executive decision-making.
- Own the delivery lifecycle for 15+ enterprise and SME clients: scoping, architecture, sprint planning, release and sign-off; maintain 95% on-time delivery with no escalation leakage.
- Introduce CI/CD pipelines and SOP documentation, cutting manual release and handover effort by roughly 30%.

Full-Stack Developer and Team Lead, Apex Infinity Tech

May 2025 - Dec 2025

Nashik, India | Joined as full-stack intern, promoted to corporate trainer and then team leader within 90 days

- Delivered five live client projects as the primary developer, spanning React front ends, Node.js and Express APIs and MongoDB data models.
- Led a small delivery team through code review, sprint stand-ups and performance reviews; team KPI achievement improved 40% over the period.
- Designed and ran internal training on engineering communication, code quality and client negotiation for 30+ associates.

Android Development Trainer, Lokare's Infotech

Nov 2024 - Mar 2025

Part-time, India

- Taught 200+ students across multiple batches in Android fundamentals, app architecture and Play Store deployment using Java, XML and Android Studio.

Android Developer Intern and Development Lead, Baoiam Innovations

Jul 2024 - Oct 2024

Internship, India

- Development lead on a production Android application; designed and implemented every application component end to end, from screen architecture to backend API contracts.
- Owned the full payment gateway integration (Razorpay and Stripe): checkout flow, server-side order creation, signature verification, callback handling and failure and retry logic.
- Implemented OAuth and OTP authentication including token refresh and session management.
- Integrated Firebase Realtime Database and Cloud Messaging for live data sync, push notifications and in-app analytics.
- Rebuilt the UI to Material Design standards, reducing reported UX defects by 25%.

Web Developer Intern and Team Lead, Faith Group

Nov 2023 - Mar 2024

Internship, India

- Primary developer across multiple client projects, building and maintaining full-stack web and mobile applications end to end.
- Configured and operated 10+ live client websites: hosting, DNS and domain setup, server provisioning, SSL, production deployments on Linux and post-launch debugging.

PROJECTS

Merkmetryx, Market Research and Analytics Platform

ReactJS, Node.js, Express, MongoDB, Razorpay, Stripe, PayPal

- Architected and built the complete backend: REST APIs, authentication, role-based access, survey data ingestion pipeline and automated report generation.
- Integrated three payment gateways through direct API integration, covering order creation, checkout handoff, signature and webhook verification, refunds and reconciliation of pending and failed transactions.
- Normalised three different provider response formats behind a single internal payment interface so the application layer stays gateway-agnostic.
- Delivered interactive data visualisation and executive reporting used for business insight.

EcoKart, E-Commerce Platform

ReactJS, Node.js, Express, MongoDB, payment gateway integration

- Built the backend end to end: product catalogue, cart and order services, user authentication and checkout with integrated payment processing.
- Implemented idempotent order handling and webhook-driven payment status updates to prevent duplicate charges and stale order state.
- Designed the order state machine (created, paid, fulfilled, refunded) so payment events and order status never drift out of sync.

Apex CRM, Client and Sales Management System (Freelance)

Node.js, Express, MongoDB, REST APIs

- Designed and developed the full backend: lead pipeline, customer records, role-based dashboards and activity tracking APIs.
- Delivered independently end to end, from requirements and schema design through API build, deployment and client handover.

Women Safety Application (Published Research)

Android, Firebase, GPS, SOS API

- Real-time safety application with SOS alerting, live GPS tracking and emergency response coordination backed by Firebase Realtime Database for instant sync.
- Published in the International Journal IJARIE, Volume 11, 2025.

EDUCATION

B.Tech, Computer Science and Engineering

2021 - 2025

D.Y. Patil Technical Campus, Shivaji University, Kolhapur, India

CERTIFICATIONS

Oracle Certified Foundations Associate | Cognizant AI Job Simulation | AICTE Android Developer Internship | TATA Data Visualisation Program | TCS iON Business Communication Skills
